GLOBAL IT HEAD, GLOBAL TOP 10 PHARMACEUTICAL COMPANY

# SERVICES

## IM Vision, Strategy and Road Mapping

Cabeus helps clients understand their information management challenges and needs, especially in the areas of regulatory and pharmacovigilance, so as to help them develop their vision, strategy and multi-year roadmaps. Cabeus also brings the required expertise to translate visions and plans into implementation programs.

## Software Assessment and Enterprise Architecture

Cabeus employs rigorous score-card based software evaluation approaches to assess technology solutions that support clients' regulatory and pharmacovigilance information management needs. Cabeus brings TOGAF and other established frameworks to define enterprise architectures.

## Business Process Transformation

Cabeus helps clients design new business processes to support information management initiatives or re-design processes to bring efficiencies, eliminate waste and bring value to the end users. Cabeus employs techniques such as Lean Sigma and other methodologies to streamline business processes.

## IDMP and Master Data Management

EMA's requirements for submitting product, safety, and quality related information in the form of IDMP provides the right opportunity for information integration across the pharmaceutical industry. Cabeus provides IDMP As-sessment, Readiness and Implementation services along with leveraging Master Data Management strategies.

## Enterprise Application Development/Integration

Cabeus excels in the design, development, deployment and integration of large-scale information management solutions based on a variety of platforms. Our team is well versed with a variety of methodologies with both on-site and off-site delivery models.

## Data Quality, Remediation and Migration

Cabeus understands the need for maintaining high-quality regulatory information in a sustainable manner so all business processes depending on registration and related information provide timely business value. We have tools and techniques to assess data quality, perform remediation and also migrate data.

## Lab-in-the-Cloud

With enterprises being increasingly dependent on long internal lead times to set up development and testing environments, Cabeus provides multiple environments using our Lab-in-the-Cloud to speed up custom application development and testing activities for our clients.

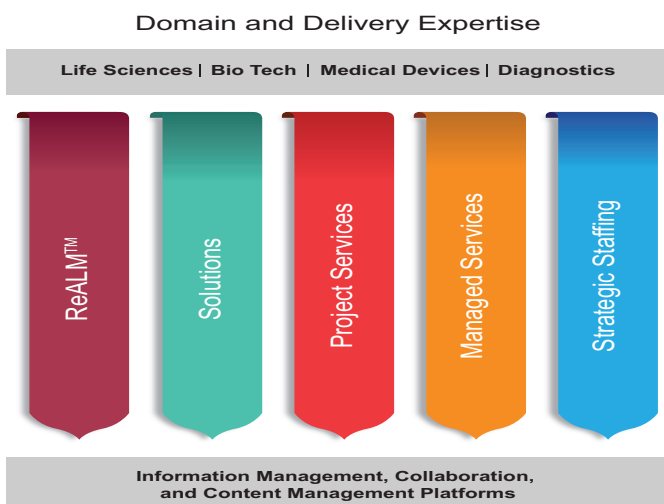

## Global Deployment and Change Management

As businesses become increasingly global, there are plenty of challenges deploying processes and systems globally and managing change effectively. Cabeus helps clients with global deployment, change management and training initiatives.

## Validation

Cabeus team is well versed in validation requirements for Life Sciences with greater rigor and discipline required to implement regulated applications.

# ENGAGEMENT APPROACH

## We get engaged with our clients by providing:

- ReALM™ SaaS solutions for regulatory intelligence and submissions planning
- Custom application development and solutions
- End-to-end project services where we are responsible for resources, timelines and deliverables
- Managed services to support existing applications with off-site teams
- Strategic Staffing to support key resourcing needs of clients
